Comments: Thank you for management plan 59892. The current negative impacts this plan seeks to address are manifest. Current dispersed camping, particularly in the indian creek area, is a great source of recreation for our region and state. I encourage preserving the dispersed nature of camping in this area - highly separated sites, not a more conventional camping area with sites close together. This will help preserve the 'wilderness' experience for those who are unable to travel to back country offerings. If possible I would hope to see additional sites added to this plan in order to provide increased access.
