Comments: Upper Cheat River project- I hope that the planned project that will involve early succession growth. The project I hope would have as a goal to provide early succession growth habitats that will benefit a wide variety of wildlife.

I hope and that the project planners would keep this in mind. My trust in governmental agencies to do the right thing is declining especially that the US Forest service is coordinating. My reason for my distrust of FS is they did a multiple use study in Allegany National Forest (Marienville district) about 20+ years ago and exercised a clause in the 99 year lease that forced recreational summer homes(Cabins) to move or demolish the cabins under the pretext of providing more multiple use; then FS put out leases for timber harvest and oil/gas wells which now dot the landscape. Evidently the cabins were in the way.
