Title:

Comments: Thanks for the opportunity to comment. Please consider the following:

1. Avoid clear-cutting unless there is an ecologically defensible rationale.
2. Avoid construction of new roadways; harvest only immediately adjacent established roadways.
3. My 8.5 acre plot is a wonderfully diverse aggregation of newly-sprouted oak, maple, hickory, and sourwood alongside long-established "parent" trees. I treat them differentially and encourage you to do the same.

I live and hike in Fannin; I camp in Rabun--they are uniquely beautiful and precious places. Principally, I request that you develop policy to protect, nurture and sustain those qualities.

Again, thanks for the opportunity for input.
