Title:
Comments: I support Foothills Landscape Project #52509, Alternate # 2. I believe we must actively manage our National Forest Areas to benefit wildlife, fish, reptiles, insects, plant life, the forest and public use. The use of controlled burns, removal of invasive species, creation of wild life openings, regeneration of mass producing trees, stream buffers and maintaining roads, trails and camp sites benefits all. Reintroducing chestnut trees could be very beneficial to many species. As a senior citizen , I would like to encourage access to these areas. Although I am older, I enjoy the experience of these areas. Just as a home, use and maintenance are necessary to maintain a healthy forest.
