Comments: there has been little "stewardship". there has been instead overexploitation and profiteering at this national land. this is natinoal land not local new mexico land. this is not state land. this s national land.the plan needs:1. protect the watershed in these drought climate times2. leave the trees alone from logging - no logging - none3. no chemical use4. no hunt or trap5. no new roads6. economic use of this national land has to cease completely . what the local profiteer take, will never be enough and has grown and grown and grownthe owners of this land, this nations citizens want survival for this forest and surveillance to protect it completely for survival.r this comment is for the public record. please receipt.
