Comments: I recommend the Forest Service do three things:
1. Prohibit commercial operations on the Forest. It is not necessary or appropriate for commercial operators to be crowding our public lands, and demanding facilities and developments to improve their business models. There have been for some time now plenty of public who have the knowledge , skills, and abilities to fill up the forest with users, no need for commercialism.

2. Apply legal strategies to assume wildlife management authority of National Forest lands. State management of wildlife is misguided.

3.eliminate grazing allotments. The La sals are not extensive . The cattle industry is soon to be ended due to meat substitutes and the impact the industry has to the environment . The USFS should recognize the impact of the meat industry to climate change.
