Comments: to whom it may concern, i support eligibility findings for all of the segments identified in the gmug forest revision process that are eligible for inclusion in the National Wild & Scenic Rivers System. rivers are the lifeblood of our environment and under threat now more than ever before. it is imperative that we protect any and all remaining water courses that maintain their integrity and benefit the larger ecosystem. i live 1 mile from the confluence of oh-be-joyful creek and the slate river near crested butte. this area supports a diverse community of plants and animals and is a cornerstone of the pristine landscape at the headwaters of the gunnison river. please consider all river and stream segments included in the draft forest revision plan and segments that were previously found eligible but left out of this plan, like the slate river. thanks for your time.
