Title:

Comments: I believe that option #2 for this project would be optimal. It is environmentally reasonable and sustainable and will greatly increase the functionality of the ski hills. Not only would it increase the recreational use of public lands, but it would decrease the current parking problems the resort is experiencing. Spreading out the skier load over a wider area will decrease the impact that current overcrowding creates.

Option #2 will set up the resort for future success while still providing proper and responsible stewardship of public lands.
