First name: Suzanne

Last name: Leshovsky

Organization:

Title:

Comments: As a Minnesotan, hiking, conservation of public lands, and reducing the effects of climate change are incredibly important to me. These lands should remain accessible to the public and not private organizations. They help absorb carbon emissions and habitats for native species. Seeing more historically, scientifically important land go to private organization use and harm would be terrible for the people, animals, and plants of Minnesota.
