Comments: Regarding Municipal Watershed management, since we are a Sole Source Aquifer here in the Moab valley, I am surprised there is not a most restrictive plan in place to focus on protecting the watershed. Please consider the "conservation Alternative" as a starting place.

In fact, I would suggest publishing the "conservation Alternative" as one to be considered.

Some other issues, managing the forest for some areas with motorized use prohibited is going to be required to protect wildlife.

Regarding the Conservation Alternative "Science" topic- it should be included as part of the Plan. However, the intent is for actual research, not the type research conducted by Japan for decades on whales- "research" that required harvesting whales in commercial quantities.

Please do the right thing- if you live in Moab or visit, you have seen the craziness going on with motorized recreation. Leaving some areas where people on foot can access the "locked up" federal land will be awesome.

These comments are brief, but and fired off quickly, but represent honest contributions to where the plan should go.
