Title:

Comments: I am not a scientist, but used to camp and love the mountains above Santa Fe. The forest has diverse wildlife habitat and was a cool getaway in the summer. This plan sounds like a forestry money grab. When I used to see just 4 wheeler tracks, the terrain and ecosystem is so delicate. It would never recover in hundreds of years!

I implore you to do a complete environmental impact survey. Do not destroy this very delicate ecosystem. I haven't even mentioned, the historical and spiritual aspects of this region, to the Native community.
