Comments: To US Forest Service, As I know there is a need to clean, and make a safer situation for forest fires, most of this can be done by hand. Please consider the season that would impact the Bald Eagle habitat the least.

Also, there is numerous acres of forest that can be made available for better hiking.
It is not imperative to use this particular area for this purpose.

This eagle habitat is unique, and should be preserved for the eagles welfare, and for people to learn and experience nature up-close. Please make a reasonable decision.
