Comments: The last 11 years I have been working (volunteer ) in southern Utah with the GCT. Thank you for the opportunity to comment.

The plan should adopt the Conservation Alternatives wilderness proposal and establish the following protected areas: Left Fork Huntington Creek Research Natural Area (RNA), Sinbad Ridge RNA, Red Towers Botanical Area, and Heliotrope Botanical Area.

Cultural sites within the forest should include protections in the plan that place a priority on their preservation. Tribes have thousands of years of locally relevant experience managing natural resources, and the Manti-La Sal must do better to encourage partnerships with Native nations to incorporate Indigenous Traditional Knowledge in the upcoming plan.

The Manti-La Sal needs to increase the protection of old-growth trees, mainly ponderosa, pinyon and juniper.

Finally, Interior Secretary Deb Haaland has recommended that full protection be returned to Bears Ears National Monument, and President Biden is widely expected to take action soon. Bears Ears planning belongs in a revised Monument Management Plan, not this Forest Plan, and that plan should be written in cooperation with the BLM and with shared governance from Native nations.

Thanks for your consideration of these comments,
