Title:

Comments: I live next to the Santa Fe Nat'l Forest in Canada de Los Alamos and am directly adjacent to the forest.

I object to the implementation of your plan as it is described as it will actually endanger the ecology of the forest, in not allowing enough time for the understory to grow and damage to profoundly the ecosystem.

At a time of such drought it also has an all too likely endangerment of the fire getting out of control.....

I think it is inherent upon your department to establish and do a thorough EIS before this is embarked upon...

I am here because I love the forest and don't want to see it unnecessarily ruined without further study as to its relevance....
