Comments: Hello,

I have lived in Santa Fe nearly 8 years and have noticed the prescribed burnings affecting my air quality and health in a very potent way. There have been days where I am working near the forest where they burn and have actually needed to go home early from work because of the fire smoke effects. Headaches including migraines have been in direct relation to breathing in the smoke at work (in Tesuque area). I have noticed this getting worse over there years I have lived here. I am interested in having the Forest Service conduct an Environmental Impact Statement so we can review and amend these prescribed burnings. Health is wealth.
