Comments: I am writing to ask you to pause the North Big Bear Landscape Restoration Project #58467. I am far from an expert on these things, but my understanding is that the project plan was based on outdated information about bald eagles in the area. It also erroneously dates the nesting season and engages in disruptive activities near a bald eagle nesting site far too close to mating season (which based on watching the live camera, has already begun). I ask that you wait until updated information can be used in planning, and until after the nesting pair (Jackie and Shadow) have finished raising their young for this year.

Thank you for your consideration.
