Comments: Greetings, this document represents public feedback for the GMUG forest management plan proposal in Colorado.

It is high time that our government and its factions put the most serious weight reasonably possible towards the protections of our public land on this planet, and not so much on the revenue generation potentials by private businesses and users that generate greenhouse gasses while using these lands. Livestock operations, timber sales, and mining are examples of private industries making money off of our public lands - while fragmenting them, causing physical damage to them, and increasing carbon dioxide and methane emissions that are fueling climate change. Allowing ATVs/OHVs and snowmobiles in our forests rips up the roads (ATVs) and unnecessarily causes noise and air pollution.

For the USFS to choose any proposed GMUG Plan outside of "Alternative D" is simply bowing to those who wish to choose short-term profits and short-term recreation interests over the protection of our public lands and our planet. And of course, we all know "There's no planet B".

Do the right thing.

John Ehmsen
