Comments: I am adding my request to the thousands of requests already submitted to you. Please do not proceed with the Santa Fe Mountains Landscape Resiliency Project without completing an Environmental Impact Statement. The health of not only the forest, but the health of the people of NM, need to be factored into this decision. You already have enough emails and letters from thousands of individuals and multiple websites and groups formed to protest against this project, to hear the concerns of the public. Please conduct an Environmental Impact Statement, which should not have to be requested like this from public individuals, but should be an automatic part of any planned burning or thinning project.
