Comments: Thanks to the USFS for a great job at pulling this EIS together.

My few comments are:

I support alternative A or C. I support the concept of multiple use of our national forests. As a 5th generation west slope person, I believe that the public lands are integrally linked to the economic engine of the region.

Further, I think that the relatively recent uptick in large forest fires threaten the quality of life in the region, and significantly contribute to carbon dioxide levels in the atmosphere. We should actively promote logging to help the local economy and reduce global warming.

Finally, we should limit the growth of wilderness areas and roadless areas - this are inconsistent with the idea of multiple use.
