Title:

Comments: Please save every tree that is growing at this moment! Don't burn them! It takes so long and much care to grow a single tree. They are our children and we need to put much energy into helping them become healthy and strong.

We should not be burning trees that do so much to collect our Carbon but should save every single tree that is growing. Trees are part of us. They provide better air quality by removing carbon dioxide from the environment. At this time on the planet it is more and more difficult for people to breathe fresh air and this is extremely important for our survival. The Covid 19 pandemic has only made humans more affected by climate change and we need to stop anymore destruction to the forest, we need to plant more trees and we need to provide a area around the forest that is extra protective. This has been shown that it is the only way to save our forests. We need to have an extra area of protection.

Please please please do not continue to burn our forests and tress. They are our our livelihood , our children , they are us!

Thank you.
