Comments: As a resident of Missouri who has been visiting Colorado multiple times each year for the past 30 plus years, I wanted to express my input into the current GMAG plan. I support local businesses and hotels with my vacation dollars. I come to CO to hike and enjoy the natural beauty, both mostly to the western slopes area for off-road recreation opportunities, specifically single track motorcycle riding. I have always been amazed by the current trail management system in CO, and the ability of hikers, bicycles, motorcycles, and even horses to co-exist peacefully and purposefully. It speaks well to the forest management in place, working with the local clubs, and recognizing that all forest users have different desires that can be met through meaningful compromise. Recreation opportunities in these areas should be expanded further with proper management, so all users can enjoy these areas with access, not further restricted by expanding Wilderness Areas, which see little to no use by tax payers.

Option C appears to be the best option, as it continues in the direction of forest management that has worked for years, for all types of forest users. It is important that the CDT remain open to all types of users as well, and should specifically be addressed. Please consider the expansion of off road single track in the forest, not further restriction. Thank you.
