Comments: I have visited the Manti-La Sal area many times over the past 20 years. I have watched recreational use of the area skyrocket. I have seen historic cultural sites, soil and vegetation trampled by both motorized and non-motorized visitors; but by far, motorized use is far more destructive. This level of recreation in such a magnificent forest is non-sustainable.

Please consider the Conservation Alternative (CA), in full, in the upcoming Draft Environmental Impact Statement. In addition, I'd also like the agency to:

*Adopt the Conservation Alternative (CA) in full.

*Adopt the wilderness proposal contained in the CA.

*Protect the native forests and vegetation. There is no good reason for chaining or allowing reckless/harmful recreation uses.

*Stop expansion of motorized use! The visible damage gets greater every year. Again, this is not a sustainable recreational use.

*Finally, protect historic cultural sites! These precious sites are our national heritage! They are not "fun" things to see and take souvenirs from. PLEASE PROTECT THESE!
