Comments: I appreciate it to comment on the Manti-La Sal Draft Revised Forest Plan.

As someone who has made several visits to the Manti-La Sal I'd like the Forest Service to analyze the Conservation Alternative in full in the upcoming Draft Environmental Impact Statement. The Conservation Alternative is a comprehensive proposal for managing the forest responsibly and best addresses climate change, native plant restoration, wildlife habitat, and watershed protection. For this reason I hope that adopt the Conservation Alternative's wilderness proposal.

The Forest Service should consider and adopt the proposed recreation opportunity spectrum (ROS) classes, as these proposed classes protect areas that currently lack roads for non-motorized users such as myself, as well as wildlife. The Forest Service should not leave open the possibility of future motorized use by designating a "motorized" ROS class in areas where this recreation type is not currently occurring and conflicts with protecting other recreational uses and resources.

Finally, the Forest Service should place a high priority on protecting and preserving cultural sites.
