Title:

Comments: This will not be a scientific treatise. It will be short and to the point:

It is WILDERNESS, the root of which is WILD! Mechanized means of control/interference does NOT belong!

The legacy of wild and unspoiled lands is one of the greatest bequests that one generation can bestow upon another. I urge you to please uphold the spirit of wild lands conservation and help to preserve these pristine and irreplaceable natural areas for our children and theirs beyond them to enjoy in their native state.
