Comments: I am supportive of CBMBA's comments.

We are fortunate to have world class trails in our valley, but as the population and number of visitors increase we need to look towards developing more sustainable, directional trail networks that can handle higher levels of traffic. I love our old school trails with their punchy climbs and rowdy downhills, but modern trail design is better for everyone. Modern Trail design benefits include:

1. Directional trail systems allow for safer user interaction and can support a higher capacity of users
2. More sustainable, reduced risk of erosion
3. Broader access for all users
4. Purpose built trails for hiker only or biker only

Our valley deserves a world class directional trail networks!
