Comments: Is the forest service in the pockets of the loggin industry AGAIN??? It always seems to be. We have lost enough carbon retention trees to all of the wildfires. Yes, cut the dead and burned ones, and the smaller "hazard" trees of 6" diameters or less, but please DO NOT ALLOW cutting, logging, and removing thousands of living and burned ones and the small ones under 6" in diameter, in these 10 National Forests! We need these tress to suck carbon out of our atmosphere. Do NOT submit to logging industry profit motives.
