Last name: Park

Organization:

Title:

Comments: Increase stacked mountain bike specific trail systems with progressive, directional travel that includes features built specifically for mountain bikes. Building directional mountain bike specific trails will increase overall enjoyment for all user groups as well as safety by avoiding unnecessary collisions or surprises. The sport of mountain biking is becoming more and more popular and the technology behind bikes continues to evolve, along with what is possible to do on them. Our trails should grow and evolve with them.
