Comments: Please stay true to the intent of the Wilderness Act and do not use chainsaws anywhere in designated Wilderness areas. Dead trees provide a wide variety of benefits for wildlife and for the ecological health of the wilderness. In areas where trees have fallen across trails handsaws and crosscut saws work very effectively to open up trails. I have cleared many, many miles of forest trails using crosscut saws while working as a Wilderness Ranger. Crosscut saws work great and don't adversely affect the Wilderness. Thank you for reading my comments.
