Comments: My comments regarding the FS Tree Management Project for Pacific Southwest Region 5: Please allow this region to experience Nature without man's interference in regards to cutting, logging, & removing thousands of "hazard trees" (both living & dead). There are many trails & roads that abut wilderness boundaries making it difficult to decide which trees need to be removed. Let Mother Nature take its course. The only "managing" of trees that needs to be done are the ones that have fallen across trails & roads. The forest should be left alone with only crosscut saws (not chain saws) to be used against fallen trees that block the trails. Thank you
