Title:

Comments: I support any landscape projects on all National Forest Lands especially where recent wildland fire has caused so much damage and dangerous conditions. I believe in hazard tree removal and protecting forest roads, public facilities, and recreational areas. Please reduce the hazards that exist on the Mendocino, Shasta-Trinity, Six Rivers, Klamath, Plumas, Lassen, Sierra, Sequoia, and Inyo NF lands. I would like to see much more done in regards to utilizing commercial size trees and it be done in a timely manner before the timber has no value. I would like to see better vegetation management and the option to use herbicide specific treatments. The Forest Service needs to manage the Public Lands by logging, thinning, control burning at the right time of year, and investing in the infrastructure that they invite the public to. The FS has a duty to act and should not need public comments to support any hazard reduction activities that protect people or the environment.
