Comments: GPLI proposal needs to be reflected in the GMUG forest plan, because it was created by, and reflects the community values.

I support the core act and would like to see it encapsuled in the final forest plan. I also would like to see the USFS not seek to increase timber production as the GMUG is more valuable for conserving biodiversity and recreation.

The GMUG forest also presents an oppportunity for the forest to consider forest wide standards on coal leases that limit uncontrolled methane ventung. I would also like to see slate river, dasiy creek, east river, upper and lower Taylor River, upper brush creek, west brush creek tributary, and cement creek be considered for wild and senior river protection.

Thank you for considering my comment.
