Comments: I write to support this project and its actions. Harvest of the timber will improve forest health and provide opportunities for enhanced recreation. I would request that the Forest Service use this opportunity to examine trails #17, #18, #33 to ensure that the trails are sustainable and provide an experience consistent with their trail management objectives. This would also be an opportunity to create a new trail segment from the eastern end of trail #17 linking back to intersect with trial #33 creating a looping opportunity. Looping opportunities help reduce trail impacts by dispersing use and creating options. The Graham/Coal system is not heavily used because besides not being widely known, it does not provide looping opportunities. Increasing the popularity of this system could draw users from other heavily used systems.
