Comments: More mountain biking and hiking trails are need as population in the mountains grows. Motorized e-bikes should be limited to motorized e-bike trails, with a unique distinction that may allow access to trails that gas powered motorcycles do not have access to. Motorized e-bike speeds are significantly higher than non motorized user groups, far more than non-motorized trails are designed and built to handle. In addition, there is no feasible way to distinguish between or regulate class 1/2/3/unclassified motorized e-bikes, and their speed and range will continue to get significantly faster and longer than they are today.

We should plan to eliminate fossil fuel resource extraction from our forests in the next 5 years.
