Title:

Comments: I would like to request that timber harvesting follow best management practices for the areas which are determined to require harvesting to promote forest health and wildlife diversity. I would like to see protection of wetlands and habitat conservation be a guiding principle of primary importance. Management must be based on specific site based factors such as the aspect of the site, the species involved, rainfall of the particular area and elevation. Wildlife protection and protection of roadless areas should be continued.

Thank you for your consideration. Tim Williamson. Gunnison Valley Climate Crisis Coalition
