Comments: The explanations and justifications for this project are excellent, but the proposal to clear-cut more than 1600 acres (22 square miles!) cannot be countenanced. Is such a drastic, devastating attack the only way of reducing fire risk and making the area more hospitable to wildlife? Will not massive erosion follow the removal of all trees?

The prescribed "cure" for the problems seems as destructive as a future fire.

Thank you for considering all the public comments.
