Comments: I strongly support the efforts for sustainable recreation - subalpine snow machine trails. Prince of Wales Island offers great opportunity for winter time recreation. What an amazing untapped resource this island provides during winter. A growing number of residents are accessing the backcountry by snow machine. It is so encouraging to see more and more people young and old getting into it. Snow machining provides a wonderful outdoor recreation activity during the long cold winter months. It also provides for economic development for the businesses in the local communities as well. Trail development would greatly help access in a safe and secure manner. I hope you will prioritize subalpine snow machine trails here on Prince of Wales Island.
