Title:

Comments: Ranger Stull,

I am writing in support of the Green Hill Vegetation Project. As a habitat volunteer with the Ruffed Grouse Society, I am encouraged to see the effort to move the project area from 0% Early Successional Habitat (ESH) to a proposed 5% ESH in the 8A1 Mix of Successional Habitats management class. I am also glad to see the wildlife habitat management activities such as planted log landings, skid trails, and temporary haul roads. It will be interesting to see the possible overall improvement for American Woodcock habitat around the wetter, flatter land of Smith Flats and the beaver dams.
