Comments: we've been reading a lot regarding forest mngmnt, and think you need to leave the forests alone regarding salvaging and other items....those nooks, and hollowed out trees are refuges for wildlife....i hope you use folks as resources that respected trees centuries/decades ago, eg indigenous people who loved the land/forest/lakes, and rivers....the forest service can protect these regions if more creative solutions were to be considered...with climate change, 113-116 degree heat over 3 days, in portland oregon last summer, june specifically, you have the opportunity to save many trees....thx
