Comments: Hello I believe that the management of the 224 f corridor outside Estacada into the national forest has been subpar. The continued closure of the route is slowly restricting the economic viability of many businesses in around Estacada and negatively impacting a major transit and recreation pathway for that area. I believe that the original contractors providing forestry management we're motivated by profit and not the safe and speedy recovery of a major resource for the Portland and Clackamas Metro area. I would hope that the ongoing management of the project leads to a speedy and safe opening of the transit corridor to allow for safe recreation in the area again.
