Comments: The fiber optic project is drastically needed in my area. I live adjacent to the National Forest and my electric lines already go through parts of the Forest. The fiber optic line is needed to promote safety and enhance communications for me. I do not have cell service in my area. Satellite TV signal is blocked by forests and mountains. HughesNet satellite service is very limited and often problematic. StarLink will also not reach my location. My power pole is marked for routing of the fiber cable and I need the Forest Service to let it through soonest.
Thank you, Guy Belleman
