Comments: Regarding the following: NCCC Action Alert! Helicopters in Glacier Peak Wilderness

USGS is proposing using helicopters to deliver and maintain seismic monitors in Wilderness where helicopters are prohibited.

I am a member in good standing with NCCC. I DO support your proposed use of helicopters to deliver these much needed

monitors for Glacier Peak. I believe the NCCC recommendation of using manual labor will put much more stress on the environment than the

use of helicopters which will not affect anything on land and will use far less resources. Please follow your best logical interests which I support.

Sincerely,

Kal Klass, past president, Monte Cristo Preservation Association
