Comments: ry important books to read so you may fully understand the reasons trees exists. They are here to teach us and can support us, not by cutting, and destroying them for financial gain, but with care and stewardship. Please read The Hidden Life of Trees, The Secret forest, and Overstory.

Our job as visitors here is to listen, understand, and protect all stands of old growth, second growth. Not replacing and replanting with a monoculture and replanting in order to justify felling ancient trees.

Look deep, act with a beautiful soul and listen to what trees teach us. Hi
