Comments: As a Montanan who hiked and fished all over w. MT and caught my first trout there at 3 years old. I really object to USFS secrecy or cutout of public input at best. USFS should do FULL NEPA before proceeding. I object to snowmobiles even close to wilderness, not to mention pollution by vehicles and a pile of human dung when the snow melts, not to mention oil, gas, and dog doo. That water was safe to drink then. Now I get warnings. I also object to the invasive giardia from dogs and horse apple weeds that are showing up.

Seems the USFS has really degenerated lately. The ranger said there would be severe consequences if I filed a harassment complaint. I mention this as proof that the USFS is not what it used to be and FULL NEPA should be required without exception.
