Comments: I applaud the proposal to protect the sensitive areas and the high alpine zones included in the plan. The area see's way too much traffic and has had significant impacts both commercially and recreationally over the last 10 years. I would ask however that additional enforcement be considered for adjacent areas as the reduced traffic will further impact the forest and private property just outside the selected zones.

Secondly, its important to note that some areas in the Yankee Boy Zone are adjacent to private property and need to minimally allow for foot access regardless of reclamation or closed areas. This should be considered when defining a standard for access by general public vs land owners in the area.
