Comments: I am concerned about the size of lumber harvesting in this Forest Service project and lack of environmental impact study. We know a lot more about the negative impact of large scale lumbering on climate as well as on the soil which thrives in an undisturbed forest. There needs to be a much bigger buffer around the lake and its wetlands. I understand there is a fen which needs to have its feeder stream protected. I think this project must have more planning modifications determined by environmental impact. Moderation would help.
