Comments: Comment on travel management plan

My comment is that you should start opening back up the miles of roads that you have closed over the years. This would allow access to wood gatherers and loggers. You need to have more timber sales. You need to harvest the dead and mature trees before you have another major fire, like the recent Lava mountain fire. In case of fire breakouts, open roads would provide quick access to fight the fire early on. I don't want Wyoming forests burning like California's. With climate change this a must. Sincerely Paul Crofts [PII]
