Comments: i ask that no expansion of the taos ski valley occur.already in the last few years there has been tremendous development with no oversight, no local input, no hydrological baseline studies nor monitoring of the quantity and quality of the water in the rio condo watershed.this has great impact on those downstream, the historic culture and native indigenous flora, fauna and wildlife.a multi disciplinary approach to the hydrology of the rio condo and the valley acequia system is needed.and in keeping the tradition of the forest services a remediation of ski runs, trails,roads for usage by the people as access to wilderness areas.no more cafes in the middle of the woods, no more building on the rio condo,no more stripping mountains of trees for recreational use, no more excavating and moving hills for building projects.more is not always better,really free taos from what it has become
