Comments: I do support vegetation management in our public lands. Noxious weeds can quickly get beyond control when not stopped as early as possible. Most important of all is to preserve our good soils for farming and at the same time protect our beautiful mountain views along the HYW 93 corridor. Set the subdivisions back from the HYW so that the land is use for ag and the houses are not sitting on the best soil that we have and blocking the views of the beautiful mountains at the same time. his would make such a difference today and greater still in the future. It will be too late soon. Greatest economic value comes from this protection.
