Comments: I worked at TSV for over 30 years and witnessed how hard it was for the Blakes to get approval's for different projects. Now there is a billion are there that clams that they are a B Corp. That is why I left. That B Corp stands for Bull Ship Corp. The new lift up Kachina has killed 2 people and turned a pristine peak into a dangerous zoo. They are buying up all the water right and farms down below now so they can control the water completely. Reasonable development is inevitable, but this B Corp is just way to make you think they are being reasonable while they dry up are heritage. I would ask that the Forest Service help us keep are heritage and not bow to this atrocity that is happening. They do not care about the local population, and David Morten said it all when he put the article in the paper about employee housing. Pleas do not bow to this crap. Thank youl.
