Comments: I oppose chemical runoff that will enter Arroyo Hondo that then makes it way to the Rio Grande, impacting a plethora of flora and fauna and access to clean water and a healthy ecosystem. The clearing of our forest land causes the snow to melt quickly due to the lack of shade, thus leaving us without water for ranchers and farmers in the summer months when it is needed the most. This is also causing high wind storms that cause severe damage and will continue to get worse with climate change.
